

ECOFOREST PRESENT IN EXPOBIOMASA

As we started announcing a couple of weeks ago, the greatest event in Spain regarding biomass in particular and renewable energies in general, Expobiomasa 2017, will take place next September 26th. The duration of this exhibition is four days, meaning that it will finish on September 29th. This exhibition will run around several different areas, mainly in the field of biomass.

This encounter is indeed meaningful to Ecoforest, since we will take advantage of these days to officially launch our new products. In this edition of Expobiomasa we will show and inform you about many different products which will be physically present.

This will be also a great opportunity to meet with people and partners from many different countries and several industrial areas, what is our favourite way to learn: listening and discussing about different opinions and guidelines. This is the reason why we have been preparing this event with effort and eagerness.

If you decide to come by and visit us in the Ecoforest stand in Valladolid fairgrounds, we will be pleased to have a delightful conversation. Several colleagues from our team will be present so you will be able to know everything possible about our products and latest innovations.

If you take a look into our new pellet stove catalogue, you may find our latest pellet stoves (Mónaco, Keeps and Nature), our latest ductable stoves (Roma and Bolonia) and also our latest insert stoves (Granada and Teide).

Another important model is Moscu, our newest Wood stove, an insert stove with a very interesting design.

Since this is an exhibition where 18.000 professionals of this area will attend, we will take advantage of this event to show our latest progress regarding heat pumps. This division of Ecoforest was born in 2011 when we presented our first Inverter ground source heat pump, adapting later this technology to high power heat pumps and allowing to design cascade and hybrid installation.

It is our nature to be innovative and in continuous evolution and that is the reason why we also will present new products regarding heat pumps. We will broaden the heat pump power range by adding lower power heat pumps, we will introduce our Monobloc heat pump, an air to water heat pump equipped with the latest technology of its area: EVI compressor + Inverter. We will also show two advanced accessories regarding energy management which will mean an added value to the already interesting Ecoforest range: the Ecoforest e-Manager and e-System.

Having this said, we encourage you to visit our stand if you wish to know more about every detail regarding our product range and new products.
